**RECYCLING OF REJECTED VEHICLES IN THE LIGHT OF ECO
STANDARDS**

UDC: 629.021;504.062

Endangering the environment represents a worldwide problem. The most developed countries have taken strong measures in order to prevent and reduce a neglecting state of the environment. Exceptionally strong regulations have been imposed on the vehicle manufacturers, whose obligation is to take back all the vehicles produced from mid 2002 onwards after expiration of their service time and to organize a recycling process involving up to 85 % of the vehicles mass.

The world has finally recognized that the recycling is one of a rather successful ways to be used to avoid the blocking by rejected vehicles being for a longer time period accumulated, endangering the area and polluting the environment.

Key words: Recycling, vehicles, environment

RECIKLAŽA ODBAČENIH VOZILA U SVETLU EKO STANDARDA

Ugrožavanje prirodne sredine je svetski problem. Najrazvijenije zemlje su preduzele stroge mere u cilju sprečavanja i smanjenja degradiranja okruženja. Posebno stroge norme zadate su proizvođačima vozila, čija je obaveza da sva vozila proizvedena počev od drugog polugodišta 2002. godine, obavezno preuzmu posle isteka roka upotrebe i organizuju reciklažu, koja će se kretati i do 85% od mase vozila.

Svet je konačno shvatio da je reciklaža jedan od uspešnijih načina za izbegavanje zatrpavanja od otpadnih materijala, koji su nagomilavani u dužem periodu, ugrožavali prostor i zagađivali životnu sredinu.

Ključne reči: Reciklaža, vozila, životna sredina
