PROFESSIONAL RISKS OF CAR INDUSTRY WORKERS IN CONDITIONS OF TRANSITION AND TECHNOLOGICAL RESTRUCTURING

Abstract

Car industry is an important branch of industry that, depending on the level of technological development, engages more or less employees who are exposed to the various professional risks during their working service. In the countries of transition, conventional metal processing is substituted for the unconventional processing method, which modifies the nature of work and represses well-known professional risks of working environment. But at the same time it brings about other risks whose harmful effects on health of the employees are to be considered.

Key words: professional risk, transition, exposition
